

Cisco AnyConnect VPN

The Cisco AnyConnect VPN allows you to access shared drives and other company features remotely.

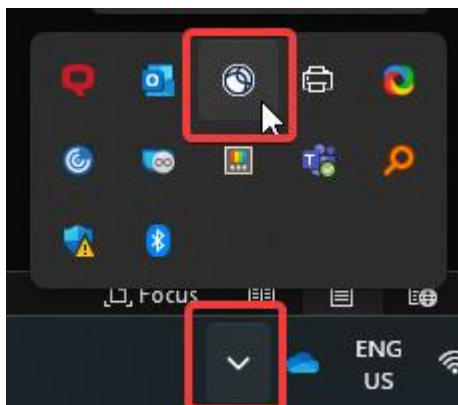

IMPORTANT:

- Only use this OUTSIDE of the office; It is not necessary while you are physically in the location.
- This only works on a company managed PC. You cannot install it at home.

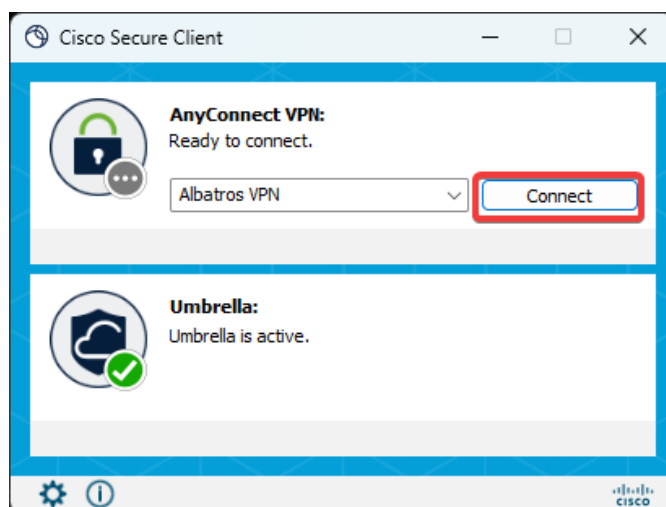

1. Type in “Cisco Secure Client” in the search bar and launch the app:

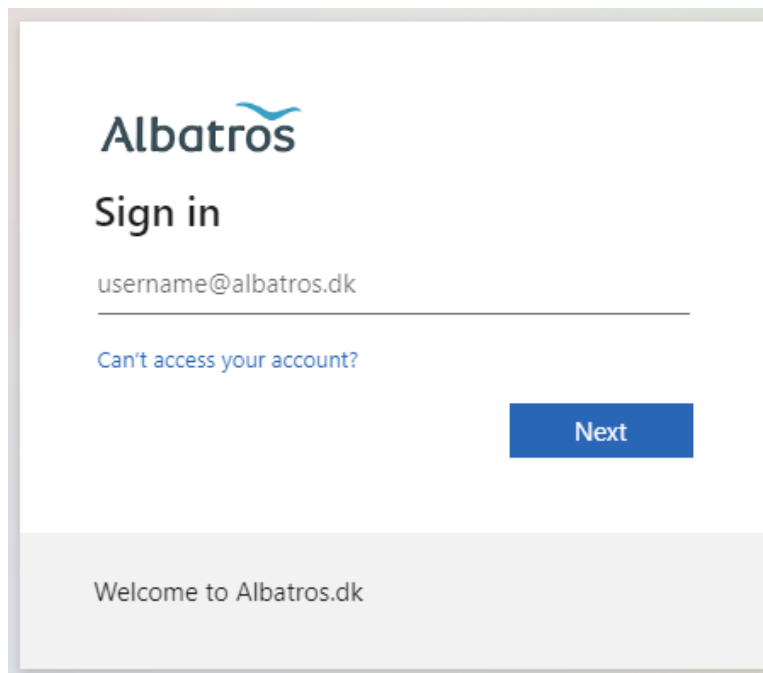

(you can also find it in the taskbar)

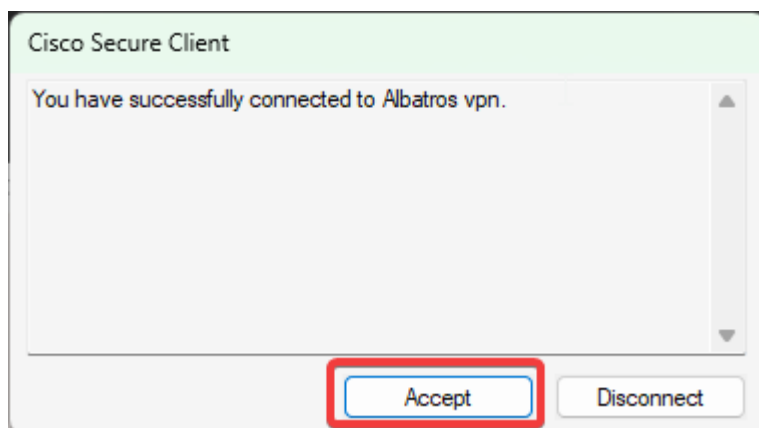

2. Click “Connect”:

3. Sign in with your company credentials:

4. Click "Accept":

You are now connected to the same network as the office. Once finished working, go back to the client and select "Disconnect":
